How to install VMware View Client on iPad.

You must be connected to the internet to access this feature

1. First download the View Client software for your device.
Click [here](#) to download the client for your device
Choose the best one for your device – for the iPad choose “VMWare view client for iOS.”
Click on “go to downloads”
Press the “download” button – then “free” then “install”
You will need a valid Apple ID to download this (even though it is free)
Once the install is complete you can close this window
2. There is now a new icon on the main screen (or subsequent screen) for launching the VMware View Client.

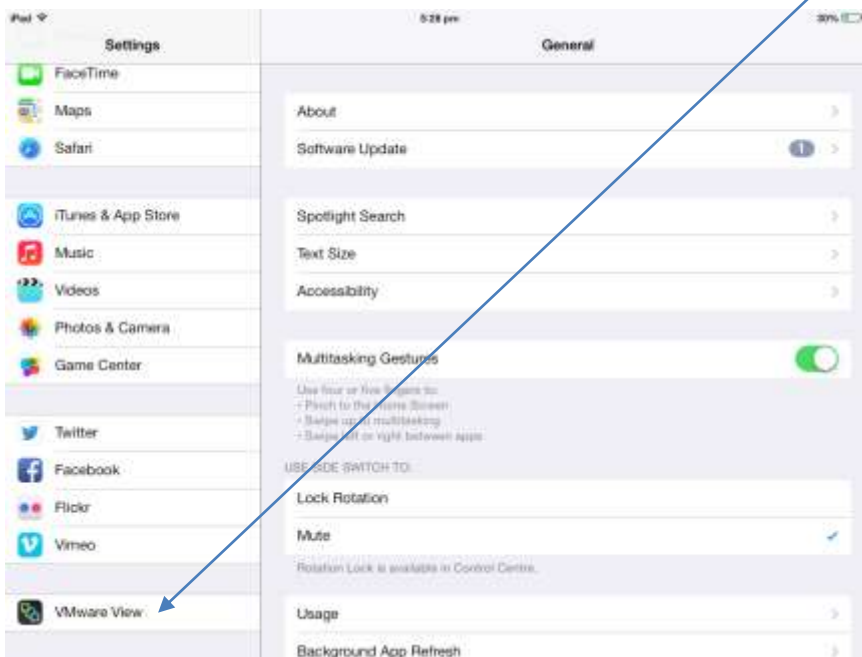

Before using it – you must set the security for this connection.

3. Go to the “settings” for your iPad *

Scroll to the bottom of the page and select “VMware View” *

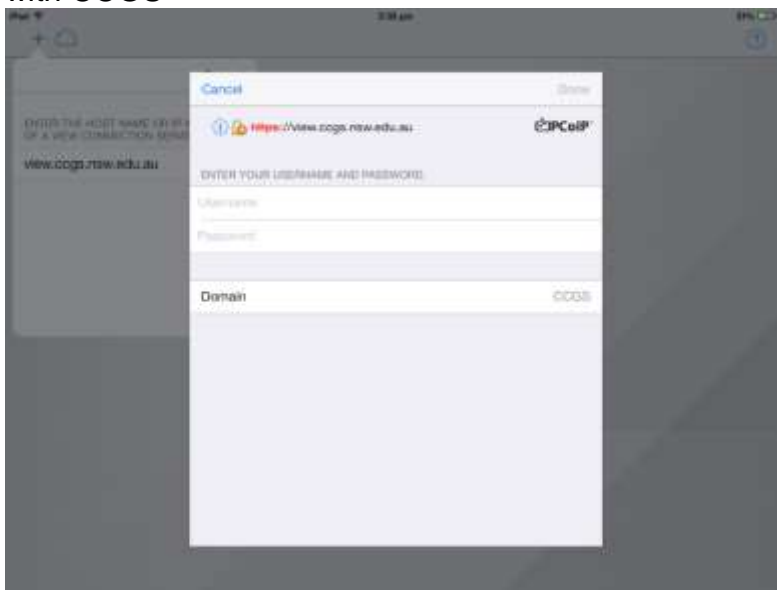

On the right – choose “certificate checking mode”
Select “Do not verify server identity certificates”
Now you can exit “settings”

4. Now go to the new icon for “VMware View Client and select it
First time – you will need to “add server”
enter – view.ccgcs.nsw.edu.au and click “connect”

enter your school user id and password. The domain should already be populated with CCGS

This will now make a connection with the school server and you will be presented with one or more view “pools” such as “Student” or “Office Admin” or “Library Staff” etc.

Select “Student”.

5. For more instructions on using the view client connection – see separate document for “View - How to connect to VMware view client from home”
